```python
def create_2array(array):

    positive= []

    negative= []

    for element in array:

        if element <0:

            negative.append(element)

        if element >0:

            positive.append(element)

    return positive,negative

array = [2,1,0,-1,3,4,-2,4]

print (create_2array(array))
```
